Deadline for manuscript submissions:

**closed (15 January 2021)**

### Message from the Guest Editor

Dear Colleagues,

Biostimulants include organic compounds and microorganisms that are applied to plants or soils to improve crop yield, quality, vigour, and tolerance to insects, diseases, weeds, or abiotic stresses. Thus, these unique bioactive compounds eventually contribute to the robustness of soil and plants, whilst enhancing productivity even in harsh environmental conditions and despite climate change. Bioeffectors are active naturally occurring compounds or viable microorganisms which directly or indirectly affect plant performance and thus have the potential to reduce fertilizer and agrochemicals use in crop production. Allelopathy and allelochemicals are related concepts according to which bioactive substances produced by plants (and some other organisms) influence the germination, growth, survival, and reproduction of other organisms. This Special Issue will focus on the effects of biostimulants and bioeffectors on plant growth. Novel research, reviews, and opinion articles on the basic principles of biostimulants and bioeffectors function, from the chemical level to the field level, toward their effective use in future agriculture are welcome.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
