Message from the Guest Editors

Integrated pest management (IPM) programs have a proven track record of significantly reducing the use of pesticides, while minimizing hazards to human health and improving environmental quality and integrity. An IPM program evaluates the potential interactions among control techniques, environmental factors and cultural practices in relation to the ecology of the pest to be controlled and the phenology of the crop to be protected. This Special Issue aims to bring together the latest research on IPM of horticultural crops as well to explore the methodologies of innovative forthcoming control tactics. Submissions should summarize key findings and discuss applications of IPM techniques, including but not limited to pest monitoring, preventive cultural practices, mechanical, behavioral, and biological control.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
