Message from the Guest Editor

The principles and standards of organic agriculture prohibit the use of synthetic chemical N, P, and KCl fertilisers and pesticides, because these inputs are thought to have negative side effects on soil, crops and human health, and the environment.

Instead, the logical framework for integrated soil, crop, and human nutrition and health management is based on (a) the use of resistant and weed-competitive varieties; (b) botanically diverse rotations that include N-fixing legume crops; (c) regular inputs of animal manure and/or organic-waste-based composts; (d) the establishment of areas of biodiversity on farms; and (e) the integration of crop and outdoor grazing/foraging-based livestock production systems.

However, although there is increasing evidence of positive impacts of organic farming practices on the environment, biodiversity food quality, crop yields are lower.

This Special Issue aims to include studies that compared effects of organic and conventional production methods on soil/crop health and food quality, and/or improve the efficacy of integrated soil and crop management practices in organic production systems.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
