Message from the Guest Editors

Advances in nanotechnology has unfolded novel avenues in the agriculture industry to address various challenges threatening global food security. However, concerns regarding their sustainable application remain unanswered. Also, mechanistic information at different hierarchical levels are required to elucidate plant response pathways involved in nanomaterial (NM) exposure. Practical efforts are necessary to assess the efficiency and benefits of NM-based products over existing agrochemicals.

In this special issue, we invite scientists to contribute original research, critical reviews, and opinions, exploring NM applications in agriculture by various means, including but not limited to crop productivity and protection, targeted/controlled delivery mechanisms, sensing plant stress and soil/water quality, or packaging. We encourage mechanistic research on NM-plant interactions using novel techniques and robust data handling, especially for crops related to human consumption or animal feed. We also encourage risk-assessment studies of NM-based products for their safe and sustainable applicability in agriculture, thereby contributing towards regulatory decision making.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
