

Special Issue

Sustainability Practices to Improve the Agri-Food Chains

Message from the Guest Editor

Sustainability practices at all stages of agricultural food chains (production, processing, distribution, consumption) are becoming important requirements to meet consumer expectations; therefore, they represent a competitive advantage for firms that can guarantee the monitoring of the environmental performance of processes. In fact, sustainability schemes are able to achieve a more sustainable supply chain and create value for stakeholders. The sustainability of agri-food systems is most often defined in reference to the three classic pillars of sustainability (ecological, economic, and social). Hence, agricultural activities and the production, distribution, and consumption of food have a direct impact on the quality of natural resources and human life. In this regard, new and complex challenges to world agriculture are necessary.

The principal aim of this Special Issue is to exchange knowledge on any aspect related to the balance between the ecological, economic, and social impacts of the agricultural practices in agricultural food chains.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
