Innovative Agronomic Approaches for Valorizing Waste and By-Products from Agriculture

Message from the Guest Editor

The generation of wastes from the agricultural industry has continued to increase globally, resulting in stockpiling by-products in the environment. Innovative approaches to the management of agricultural waste and by-products are becoming increasingly important in the context of sustainable development and environmental protection. By implementing innovative waste valorization strategies, it is possible to use the full potential of agricultural waste, optimize resource utilization, and foster a more sustainable agricultural sector. The scope of *Agronomy* is very broad, and particularly welcomes original, novel fundamental research. *Agronomy* also aims to provide a platform for the discussion, summary, review, and preview of agricultural waste management. Full-length research articles, critical reviews, and short communications are accepted.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
