

Special Issue

Recent Advances in Legume Crop Protection—2nd Edition

Message from the Guest Editors

The legume family holds significant economic importance as a global source of starch, protein, oil, and vegetables for human consumption; however, frequent disease outbreaks, pest infestations, and weed proliferation critically constrain the achievement of high and stable yields in legume crops. To address these challenges and advance sustainable legume cultivation, researchers are actively developing innovative solutions through intensive studies, and this Special Issue aims to disseminate cutting-edge advances by publishing high-quality research articles focused on managing legume crop diseases, pests, and weeds, along with related interdisciplinary topics. Following the success of our inaugural Special Issue, 'Recent Advances in Legume Crop Protection', which attracted submissions from around the world, we now propose a second edition to broaden the scope of applications. We welcome original research and review articles addressing all facets of legume crop protection.

Guest Editors

Dr. Kai Li

Dr. Yu Gao

Dr. Zhaofeng Huang

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
