Special Issue

Seed Dormancy and Germination: Ecological, Physiological and Applied Perspectives

Message from the Guest Editor

Seed germination and dormancy are crucial stages in the plant life cycle and determine the success of natural regeneration, agricultural production, and biodiversity conservation. Despite significant advances in understanding these processes, many challenges remain, from intraspecific variability to responses to climate change and anthropogenic pressures. In this Special Issue, we aim to bring together original papers and reviews that explore the physiological, molecular, and ecological mechanisms that regulate seed dormancy and germination, as well as their implications for sustainable agriculture, ecological restoration, and the use of new technologies. Furthermore, we welcome papers that integrate interdisciplinary approaches, present methodological innovations, or discuss the practical application of knowledge in the global context of food security and adaptation to environmental change. We invite researchers from different fields to submit their manuscripts and contribute to a comprehensive and up-to-date discussion on this essential topic for science and society. We look forward to receiving your contributions. Prof. Dr. Edna Ursulino Alves

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
