Modern Strategies for Sustainable Orchard Crop Management: Enhancing Yield, Fruit Quality and Disease Resistance

Message from the Guest Editors

In the context of climate change and a continuously increasing global population, agriculture—and therefore fruit cultivation—is faced with new and important challenges. The increasing occurrence of extreme meteorological events, heatwaves, and drought periods, make innovative agronomical practices aimed at improving plant resistance to stresses necessary. In this regard, several agronomical practices related to, for instance, soil management or the reuse of waste products as amendments and fertilizers have shown to improve soil fertility, environmental biodiversity, and plant health. Agronomic management has a significant impact on perennial fruit crops, influencing physiological processes, the frequency of diseases and pests, yield, and the qualitative composition of the derived products. The aim of the Special Issue is to collate studies on the environmental sustainability of agronomic practices in orchard crops in terms of production yield and fruit quality. We invite work on the following topics: soil management, irrigation, fertilization, pest control, training systems, harvesting techniques, and varietal selection.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
