

Special Issue

Seed Production and Technology

Message from the Guest Editors

Seed quality is directly related to the successful establishment of a crop in a field and is fundamental to ensuring satisfactory seed production. In seed production, cultural practices that improve seed quality are essential. On the other hand, when establishing a crop, it is important to select seed lots with high performance. Germination tests can overestimate the physiological potential of batches because they are carried out under ideal conditions; other complements have emerged, such as vigor tests, which should be simple, quick, and inexpensive and should directly correlate with seedling behavior in the field. In this Special Issue, we invite original research papers and reviews that report on different approaches to innovation in seed production and technology, including agronomic practices to improve seed quality, innovative methods for quality control, invasive and non-invasive techniques, and the potential applications of this knowledge to develop rapid, effective, and safe methods for seed production and quality assessment.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
