Interactions between Plants and Soil Microbes in Natural Ecosystem

Message from the Guest Editor

Plant–soil–microbe interactions drive biogeochemical processes in terrestrial ecosystems. In these systems, plants release nutrients into the soil in the form of residue decomposition and root exudates, which improves the soil environment and supplies substrates to soil microorganisms, and microorganisms transform organic nutrients into inorganic nutrients for plant absorption and utilization. The synergistic relationship between plants, soil, and microorganisms is the internal driving force of maintaining ecosystem structure and functions, such as nutrient cycling, biodiversity conservation, and food provision. Plant–soil–microbe interactions have become a hot spot in soil ecology, plant science, and environmental research. We especially encourage authors to conduct investigations into plant–soil–microbe interactions in natural soils, such as in grasslands, shrubs, forests, swamps, deserts, and so on, and reveal the underlying mechanism between the aboveground structure and belowground functions, such as the diversity–function relationship, nutrient–microbe associations, and rhizosphere dynamics.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
