Special Issue

Genetics, Genomics and Breeding of Spice Crops

Message from the Guest Editors

Spice crops are one of the most important crops in the world and play an important role in the human table with their unique aroma and medicinal value. Since the release of the Arabidopsis genome sequence in 2000, more than 400 plant genome sequences have become available. Meanwhile, various technologies and bioinformatics tools have been developed for sequencing, assembling, annotating, and analyzing plant genomes. Now that the genomes of spice crops such as garlic, green onion, onion, and ginger have been published, this Special Issue of Agronomy will focus on the genetics, genomics, and breeding of spice crops. We welcome all original research papers and reviews on genomics, genetics, and gene function analysis of spice crops and believe that your contribution will significantly impact the future of spice crop breeding.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
Gulbali Centre for Agriculture, Water and Environment Research, Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
