

Special Issue

Cereal–Legume Cropping Systems

Message from the Guest Editors

Climate change has a very significant impact on agriculture and the environment. These changes pose a serious threat to food security and humanity in the 21st century. Knowledge of biology and proper management of plants in the conditions of climate change are very important. The progressive degradation of the natural environment, its pollution, and, consequently, climate change indicate the need to develop an interest in these issues and the necessity of monitoring studies in the conditions of climate change. The rapid growth of the human population forces us to secure our protein needs. Legumes are an excellent option that is gaining increasingly favor and are a valuable source of food for both humans and animals. This Special Issue aims to collate research papers describing cereal and legume cultivation systems in the conditions of climate change. Top-level research will be taken into account if the above topics are used to develop cultivation and management systems of plant production in the agricultural sector.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
