

Special Issue

Biochar's Role in the Sustainability of Agriculture

Message from the Guest Editors

Biochar is an environmentally friendly soil amendment that has the potential to address the multifaceted challenges of soil deterioration, improving soil health, and maintaining crop yield stability. However, the underlying mechanisms of biochar amendment affect various soil physiochemical and biological properties. This has a negative effect on crops' physiology, growth, and yield, with their resilience to abiotic stresses remaining largely elusive.

This Special Issue endeavors to delve into the role and mechanisms of biochar amendments in modulating rhizosphere environments, enhancing crops' resistance to stresses, optimizing crop growth and yield, improving crop nutrient and water use efficiency, and reducing greenhouse gas emissions under different production systems. Moreover, this Special Issue aims to facilitate the exchange of the latest findings and novel insights by providing a comprehensive platform for researchers and experts in the field of biochar applications in agriculture. The knowledge disseminated within it will contribute to addressing the challenges posed by changing climatic conditions and the growing global demand for increased food production.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
