

Special Issue

Advancing Fruit Tree Breeding: Exploring Cutting-Edge Techniques in Genome Editing, Genetic Transformation, and In Vitro Culture

Message from the Guest Editors

Using traditional breeding techniques for woody plant species is still challenging due to their long biological and reproductive cycles; thus, the advent of New Plant Breeding Technologies (NPBTs), along with the CRISPR/Cas9 system, represents a viable solution for speeding up the breeding process, allowing for the precise mutation of target genes. However, until now, the use of these techniques in woody species has remained limited due to the significant occurrence of regeneration and transformation events. For these reasons, the main aims of this Special Issue are focused on setting up protocols for woody plant's genetic engineering, transgene-free methodology, and in vitro culture and regeneration.

Guest Editors

Dr. Vera Pavese

Prof. Dr. Roberto Botta

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
