

Special Issue

Efficient Water Management in High-Value Crops at Different Spatial Scales

Message from the Guest Editors

Water conservation and management are essential for the sustainability of agroecosystems. In high-value crops like vineyards, nut crops, and fruit trees, these practices are crucial due to their large acreage, diverse growing conditions, and high input demands. Optimizing water use is especially important under current climate conditions, as crop yield, quality, and economic viability largely depend on water availability. This Special Issue aims to collect original and quantitative research on water management in high-value crops (i.e., fruit orchards, olive groves, vineyards, citrus, berries, nut crops, etc.), covering topics such as:

- Research on irrigation strategies (deficit irrigation, partial rootzone drying) to save water while maintaining yield and crop quality, especially when employing alternative water sources;
- Studies on cultural practices that reduce water use in orchards (mulching, cover crops, canopy management, cultivar and rootstock selection);
- Studies on climate change impacts on water availability for high-value crops, in the field or under controlled conditions;
- Works using remote sensing to estimate crop water needs at various scales (plant, orchard, watershed).

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
