

Special Issue

Evaluation and Management of Heavy Metal Contamination in Agricultural Soil and Water

Message from the Guest Editors

In recent years, heavy metal pollution has received widespread research attention. Heavy metals are highly toxic elements which are persistent in the natural environment, resulting in magnification throughout the food chain, adversely affecting both human and environmental health. Heavy metals that are of environmental importance include cadmium, lead, arsenic, and mercury. Thus, these metals which are released into the environment should constantly be monitored and controlled, and there should be remediation for heavy metals in contaminated soils and water. This Special Issue will welcome contributions in the field of interest, including sources of heavy metal pollution monitoring, management and mitigations, appropriate restoration, and treatment plans in agriculture, to inform researchers and other stakeholders regarding the prevention of heavy metal pollution of water and soil.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
