

Special Issue

Integrated Management Tactics for Resilient and Improved Citrus Production

Message from the Guest Editors

Citrus production has declined around the world as a consequence of citrus greening or huanglongbing disease (and many more biotic factors), growing urbanization, environmental factors such as elevated or low soil pH, declining soil fertility, and constraints related to rootstock/scion combination. Recent research advances have improved our understanding of some of these constraints and this Special Issue will provide the necessary avenue for sharing such data. The Special Issue will encourage researchers to share information on effectively managing biotic and abiotic constraints to citrus production based on current or emerging trends. This research will cover topics on integrated citrus management, plant nutrition, water management, integrated disease/pest management, and citrus rootstock/scion improvement for managing environmental stresses and biotic limiting factors. We are seeking original research papers, review papers, and short articles.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
