

Special Issue

Biological Pest Control in Agroecosystems—2nd Edition

Message from the Guest Editor

The biological control of insect pests has been increasingly used in integrated pest management (IPM) in recent years. The use of natural enemies in the management of insect pests has a series of benefits, such as the absence of environmental pollution and ecological imbalances, and it guarantees better food quality and health safety for consumers, producers, and workers. Even in the face of the benefits of using biological control, there are still many challenges to its adoption in practice. Therefore, the purpose of this Special Issue is to highlight recent research on the biological control of insects.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
