

## Special Issue

# Research Progress in Sustainable Pest and Disease Control of Fruit Tree

### Message from the Guest Editors

Fruit production is currently in a very challenging period with regard to the regulation of the European Green Plan.

Considering the existing situation and the growing problem of insufficiently effective pest and disease control with existing formulations, it is necessary to intensively find new, effective, and environmentally acceptable solutions in controlling pests and pathogens of fruit species. New solutions should be found within integrated pest management (IPM), which implies the sustainable use of several different measures, such as agrotechnical, mechanical, physical, biological, genetic, and chemical ones. The effectiveness of these measures implies keeping the pest population below the harmful economic critical level.

In this Special Issue, all original articles and reviews covering any aspect of the effectiveness of new technologies, IPM measures (biological control agents, use of pheromones, confusion and attraction methods), fruit varieties with repellent pest effects, or any other multidisciplinary sustainable approach to the pest and diseases control of fruit species are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
