

Special Issue

Energy Crops in Sustainable Agriculture

Message from the Guest Editors

Energy crops have always been part of agroecosystems around the world. Moreover, they have garnered increased interest among farmers in recent years, depending on the political climate and the economic viability of their cultivation. They are often associated negatively as a direct competitor to food and feed crops. However, in the right space and at the right time, they can be the answer to pressing agricultural problems, such as the climate crisis, biodiversity collapse, environmental pollution, and lack of agricultural production profitability. The current Special Issue aims to present sustainable technologies for the cultivation, processing, and final use of crops intended for energy purposes and to highlight numerous benefits of their presence in the agricultural landscape. To achieve this, we welcome papers related to the improved sustainability of energy crops' production, as well as the innovations connected to this process. This journal of *Agronomy* will accept papers in the field of agriculture and related disciplines, corresponding to this Special Issue's subject and representing a decent scientific level of elaboration.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
