# Effective Soil and Water Conservation Practices in Agriculture

### Message from the Guest Editor

The increasing trend in the world population that is projected to be approximately 10 billion people by 2050 is putting pressure on the limited soil and water resources and food production under a changing climate. Soil and water resources are being degraded through agricultural expansion by diverse natural and anthropogenic factors, which create a non-balanced system, decreasing system sustainability. To tackle these challenges, different strategies have been investigated by scientists and crop producers to improve soil and water management for resource conservation. Different practices are used to target crop selection to enhance abiotic and biotic stress tolerance, crop choice for increased resilience, smart agriculture, precision water management, no-till, and conservation tillage, efficient utilization of the available land resources to improve crop productivity per unit inputs (e.g., water and crop nutrients) and promote agriculture sustainability and protect the environment, efficient use of surface and groundwater, protection of natural ecosystems, soil protection, erosion control associated with different tillage practices, reduce sediment transport and cover cropping.

# About the Journal

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Editor-in-Chief

Prof. Dr. Leslie A. Weston
Gulbali Centre for Agriculture, Water and Environment Research, Charles Sturt University, Wagga Wagga, NSW 2678, Australia

## Author Benefits

**Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:**

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

**Journal Rank:**

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
