Towards Sustainability: Trade-Off Between Pest Management and Environment

Message from the Guest Editor

Crop protection has long been associated with a "pesticidal" action of active substances. In the Latin sense of the term (caedere), which means to kill pests, the toxicity and eco-toxicity of these substances has been criticized for decades. The emergence of new types of substances, i.e., those of "biocontrol agents", new modes of action that are not actually "biocidal", and new methods of application in fields have allowed and will continue to reduce the impact of pesticides on the environment and humans. Despite everything, these substances are reported to be less effective; supposedly, they are intended directly or indirectly to counter pests and any of these substances can have undesirable effects. It is this benefit/risk that must be reduced by acting on the two levers—danger and exposure. Certain initiatives on active substances, contribute to reducing the general toxicity of plant protection products, reducing residues and, therefore, their negative impacts. Most of these new substances are compatible with organic farming plant protection restrictions, increasing the potential sales and market penetration. Articles and reviews related to the above topics are welcome.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
