

Special Issue

Integrated Pest Management for Invasive Species in Fresh Fruit Production Systems

Message from the Guest Editors

The current Special Issue aims to provide a forum in which to present recent advances in the on-farm management of invasive pests that threaten fresh fruit and vegetable production globally.

The recent pressure to reduce pesticide use, in Europe and elsewhere, calls for alternative methods to manage invasive pests, and novel approaches. Technological advances offer new opportunities in pest management and facilitate the execution of complex pest management decision support tools.

We welcome submissions of original research papers, concept papers and systematic or non-systematic reviews that tackle the integrated management of invasive pests on farms.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
