

Special Issue

Response of Crop Plant Growth and Water Use to Different Irrigation Regimes

Message from the Guest Editor

Background & history of this topic: With global warming, drought has become a key constraint on agricultural productivity. The frequency of droughts will significantly increase under climate change, especially in arid/semi-arid regions. Therefore, efficient irrigation management is central to the challenge of balancing increasing drought events and water demands. Scope of the Special Issue: Recent progress has revealed the regulation of irrigation scheduling on crop growth and development, yield and composition, and developed models for simulating crop response to irrigation scheduling at different growing stages, while the mechanism and simulation of crop physiological response to different irrigation regimes challenge our current understanding. Phytohormone regulation on crop growth and yield formation under different irrigation scenarios, water and nutrient transportation from root to shoot under different irrigation regimes. What kind of papers are we soliciting: Research articles, review articles, and short communications are invited.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
