

Special Issue

The New Agricultural Revolution: From Traditional Farms to Smart Agriculture—New Technologies in Agriculture 5.0

Message from the Guest Editors

The wide variety of sensors that are being used in agriculture generate a huge volume of data. The analysis of these data is done using a special technique known as big data, a new discipline for processing massive data. This discipline uses artificial intelligence (AI) techniques, predictive systems, models, neural networks, and other tools designed to support the decision-making processes. The use of new sensors in agriculture, its communication protocols based on IoT technology (wifi, LoRa, Sigfox, NBloT, etc.) supported by cloud database and cloud computing, together with these new data processing tools, have resulted in what is known as Agriculture 5.0. More specifically, we invite you to contribute to this Issue by submitting original research related to everything concerning the technological aspects and digitisation processes involved in Agriculture 5.0, such as: sensors development and its connectivity, IoT communication protocols, open data, cloud database and computing, big data, AI, predictive systems, and decision-making tools.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
