Sustainable Production Systems and Material Utilization of Plant Biomass

Message from the Guest Editor

The sustainable cultivation of biomass plants should be the aim. Perennial crops in particular are characterized by so-called ecosystem services such as refuges for beneficial organisms, pollen and nectar sources for insects, humus formation, and/or erosion control. The outcome of the sustainable production, valuable biomass, has to be used more intelligently. However, for many years, research was focused on the energetic use of biomass (e.g., for heating). In several cases, a high-value or superior material use of biomass is possible. Examples of the material use of plant biomass include substrates, building construction and packaging materials based on biomass. Some of these bio-based products can be used several times in cascade utilization and should only be used to produce energy at the end of their life cycle. The goal must be to understand biomass as a valuable raw material, which can be used sustainably and innovatively throughout the entire value chain.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
