

Special Issue

New Advances in Soybean Molecular Biology

Message from the Guest Editors

Revealing the genetic basis of important agronomic traits of soybean is an important research topic in soybean breeding applications. Soybean biotechnology applications and gene molecular biology have been cutting-edge research in recent decades. For this Special Issue, the aim and scope include mapping, expression characteristics, genetic effects and breeding applications of regulatory genes for important agronomic traits in soybean. We highly welcome scholars to contribute papers (article/review/communication) including but not limited to the following topics: Gene mapping, expression analysis, functional analysis, regulatory networks and breeding applications in soybean.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
