

Topical Collection

Crop Physiology and Stress

Message from the Collection Editor

Agriculture faces challenges such as environmental change and an increasing world population. The increase in the quantity and quality of agricultural products is of great interest. This requires adequate growth and development of the plant and proper crop management. There are several lines of research aimed at studying the physiology of plants and crops. This collection aims to include the main lines of study that are being developed considering the optimal and stress scenarios that are affecting crops. This Topical Collection will focus on “Crop Physiology”. We welcome novel research and reviews covering all topics related, but not limited, to environment–plant interaction, stress physiology, plant–microbe interaction, adaptation of plants to the environment, plants’ response to stress, and production and stress.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
