

## Special Issue

# Recent Advances in Crop Modelling

### Message from the Guest Editor

Under the circumstance of climate change, we are facing a world with an increasing amount and severity of extreme weather events. Crop production is getting more and more vulnerable to such extreme events. To better understand and quantify the impacts of these weather events on crop yield and production, we need innovative improvements in crop models. Those improvements are crucial in assessing the effects of extreme weather. The advanced models can help researchers and policymakers address global food security issues. The models can also help crop producers make more informed decisions in crop management. In the special issue, we are looking forward to receiving new ideas and new suggestions on any aspect related to crop modeling across different climate conditions and crop types.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
