

Special Issue

Cultivation Practices, Pharmaceutical and Nutritional Value of Weeds

Message from the Guest Editor

It is well known that weeds adversely affect crop production due to competition for water, nutrients, and light. Despite this fact, weeds that exhibit nutritional value and pharmaceutical properties have significant potential uses. Due to these properties, several weed species are currently grown for the production of various products. This Special Issue will focus on various aspects of “Cultivation Practices, Pharmaceutical, and Nutritional Value of Weeds”. We welcome original research papers, communications, and reviews covering all issues related to “Cultivation Practices, Pharmaceutical, and Nutritional Value of Weeds” such as cultivation practices of weeds (fertilization, irrigation, crop establishment, etc.), genetic material and crop improvement of weeds, pharmaceutical properties of weeds, nutritional value of edible weeds, and yield and quality improvement. There should be a particular focus on the main bioactive compounds contained in edible or medicinal weeds since its content determines the final product quality and its biological properties. It is important to submit articles about plants that are considered weeds.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
