

Special Issue

Application of Allelochemicals in Agriculture

Message from the Guest Editors

Population explosion has caused global food insufficiency, which has become an open challenge for the global agricultural community and researchers. In addition, agricultural production has always been threatened by the presence of plant pathogens and weeds. The latter cause severe economic damages in up to 34% of field crops. It has been shown that allelochemical compounds hold promise as an alternative to chemical herbicides and as a new source of biostimulants for enhancing crop production under stress conditions, contributing to sustainable crop management. Furthermore, the allelopathic effect of many allelochemicals has been well confirmed in the literature, but to our knowledge, few studies have been focused on their application in agricultural fields. That is why in this Special Issue, we wish to focus on the application of allelochemicals in agriculture. This may involve allelopathic activity tests under greenhouse conditions and in the field, as well as isolating and identifying allelochemicals suitable for application in agriculture as plant protection products and biostimulants.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
