

Special Issue

Agricultural Management for Climate Change Adaptation, Greenhouse Gas Mitigation, and Agricultural Productivity

Message from the Guest Editors

The increased likelihood of extreme weather events driven by global warming and the intensification of the water cycle is a major risk to the continuing and stable production across many agri-food systems. Coupled with increasing global population growth and demand for food, increasingly frequent extreme climatic events elicit an urgent and compelling need for the development of new knowledge, technologies and practices enabling scalable, sustainable intensification. Robust projections of climate impacts on crop growth underpinned by process-based models are fundamental in the quest to design effective, holistic and systems-based adaptations that minimise down-side risk associated with future climates. With this Special Issue of *Agronomy*, we seek integrative studies that shed light on new, developed or improved models to better understand the interaction of crops and environmental conditions under climate change, as well as reviews that offer original perspectives on crop models developed in response to climate change. Articles highlighting the use of crop modelling to cope with climate change with different agronomic options are also welcome.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
