

Special Issue

Research Advances in Digital Technologies to Improve Agricultural Productivity

Message from the Guest Editor

Digital agriculture has developed quickly, and its applications are essential to meet the high demand for food production in a sustainable way, seeking to meet the United Nations Sustainable Development Goals. With this Special Issue of *Agronomy*, we seek integrative studies that demonstrate the progress of research that makes it possible to increase the productivity of agricultural crops, as well as reviews that offer original perspectives on the use of remote, aerial, and proximal sensing, artificial learning techniques, and/or about the use of robots in agriculture. In addition, we encourage contributions that present original studies focused on predicting productivity and maturity of crops under field conditions, the management of biotic and abiotic factors that affect productivity in the field, and use of agricultural robots to perform selective harvesting, spraying, and other agricultural operations.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
