Effects of Storage Environment and Technology on Fruit Quality

Message from the Guest Editors

Their storage and transportation environment has a significant impact on the quality of the fruits in circulation. Most rotten fruits are caused by improper post-harvest handling. Therefore, it is necessary to conduct research on the impact of the storage and transportation environment on the quality of fruits in circulation, as well as analyzing the influence of environmental factors, packaging, physical field assistance, and other parameters or technologies on the quality of fruit during storage and transportation. Papers relevant to the following topics are welcomed in this Special Issue, including, but not limited to:

- The correlation between storage and transportation environmental control and fruit quality;
- The influence of new packaging structures, materials, etc., on the internal environment of packaging and the preservation quality of fruits;
- The impact of physical field-assisted preservation technology on the storage and transportation quality of fruits;
- The effect of 1-methylcyclopropene and other post-harvest treatments on fruit quality during storage.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
