

Special Issue

Genetic Optimization of Grains for Different Production Environments

Message from the Guest Editors

Grains are the most significant food source for human dietary energy globally. Grains, such as wheat, rice, corn, oat, sorghum, millet, rye, barley, etc., provide essential nutrients and minerals, and play a very important role in human life and the livestock sector. The demand for grain production is rising continuously with increasing population. Grain growth and yield are affected by various production environments of which abiotic and biotic stresses are the most limiting factors. Solutions to increase grain crop tolerance and minimize the effects of adverse environments on grain growth and yield have been actively sought. In recent decades, the sprout of novel biochemical and molecular technologies provide new approaches to progressively improve grain growth and yield upon different production environments. In this Special Issue, the most recent accomplishments on molecular and genetic optimization of grains for increasing grain production in response to different abiotic and biotic environmental stresses will be provided.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
