Nanotechnology-Driven Agricultural Innovations

Message from the Guest Editor

Nanotechnology, also shortened to nanotech, is the use of matter on an atomic, molecular, and supramolecular scale for industrial purposes. Today, sustainable agriculture is needed. Nanochemicals have emerged as promising agents for plant growth, fertilizers, and pesticides. In recent years, the use of nanomaterials has been considered as an alternative solution for controlling plant pests, including insects, fungi, and weeds. Nanotechnology also may act as sensors for monitoring the soil quality of agricultural field, and thus maintain the health of agricultural plants. Additionally, the application of nanofertilizers in water and waste treatment is also feasible. In conclusion, nanotechnology has made great progress in agriculture over the past few decades. The discovery of new concepts of how to protect our fields, crops, plants and fruits and how to maximize their growth at a higher level is ongoing, which is driving innovations in the field of agriculture. Original research articles and review articles that address “Nanotechnology-Driven Agricultural Innovations” are welcome.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
