From Monoculture to Cover Crops: Evaluating the Benefits and Limitations of Different Cropping Systems

Message from the Guest Editor

This Special Issue, "From Monoculture to Cover Crops: Evaluating the Benefits and Limitations of Different Cropping Systems", explores the historical shift from traditional monoculture to more diversified cropping systems, particularly the adoption of cover crops. The aim of this Special Issue is to assess the ecological, economic, and agronomic advantages and challenges associated with these systems, emphasizing sustainability and soil health. We welcome cutting-edge research that focuses on the latest innovations in cover crop management, ecosystem services, and resource conservation. We aim to gather papers including original research, reviews, and case studies that examine the benefits, limitations, and practical applications of diverse cropping systems, aiming to provide insights for both researchers and practitioners in the field.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
