

Special Issue

Characteristics and Technology in Mediterranean Agriculture

Message from the Guest Editor

The Mediterranean basin is characterized by a climate which is advantageous to the cultivation of a wide variety of ornamental, vegetable, and fruit crops grown in greenhouses or outdoors. Agriculture in the Mediterranean basin is an important economic engine, not only for the economic value of fruits and vegetables, but also for the generation of knowledge and technology. A fundamental aspect for the future of agriculture is to be able to bring together all this knowledge about: (i) the most suitable types of crops for each area, (ii) what farming techniques to apply, and (iii) the optimal technological level that allows obtaining the maximum possible profitability. This information should be made available to farmers to assist them in the planning of their farms. In this Special Issue, we invite submissions from researchers to share their experiences in Mediterranean Agriculture: selection of the most suitable crops and varieties (horticultural or fruit, intensive or extensive), soil management techniques, optimization of water use, crop protection, harvesting techniques, climate control, technological advances, agrarian economy, etc.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief
