Mediterranean Agriculture under Climate Change: Threats and Opportunities

Message from the Guest Editor

The Mediterranean basin is considered a climate change hotspot, being one of the regions worldwide that is expected to suffer more severe effects of warming and drying. Several crops, such as viticulture, olive, almond and chestnut trees, among others, are part of the Mediterranean ecosystem and are largely acknowledged within the food sector. Taking into account the key influence of the climatic factors on yields and quality attributes of these crops, climate change may indeed affect these important food resources. It is a fact that past trends point to an increase in temperatures, as well as a decrease in precipitation, within the Mediterranean basin. Furthermore, future climate scenarios point towards enhanced stress conditions for crop growth until the end of the century. The current Special Issue of *Agronomy* welcomes articles related to the field of climate and climate change impacts on Mediterranean agriculture, including the assessment of potential adaptation measures against these threats. Field trials and/or modelling approaches (crop or climate modelling) are also valuable contributions to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
