

Special Issue

Plant NAC Transcription Factors

Message from the Guest Editor

The NAC transcription factor is one of the largest plant-specific transcription factor families that are involved in a multitude of regulatory roles including growth, development, defense, and stress responses. This Special Issue intends to summarize the recent progress in our understanding of the many regulatory functions of NAC proteins. Our goal is to provide a compendium of the latest discoveries regarding this multifunctional regulatory protein and its potential applications in agriculture.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
