Use of Biostimulants on Soil Restoration in Polluted Soils by Pesticides: Effects on Soil Biochemical Properties

Message from the Guest Editors

The extensive use of various pesticides in agriculture with the objective of eliminating possible pests caused by weeds, insects or pathogens that can cause a negative effect on the development of crops and, consequently, on their yield is causing a serious environmental problem due to the consequent contamination of soils and aquifers. Therefore, we need to improve the understanding of the relationship between the degradation of pesticides in contaminated soil after the application of biostimulants and the biochemistry of the soil. For this reason, this Special Issue will focus on the restoration of soils contaminated by pesticides after the application of biostimulants, with special emphasis on the biochemical activity of the soils. Articles highlighting the influence of biostimulants in such pesticide-contaminated soils on soil biochemistry will be welcome. This Special Issue will generate more knowledge about this challenge for the sustainability of agriculture.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
