

Special Issue

Integrated Mite Management in Agriculture

Message from the Guest Editors

Managing mite pests has long been a challenging task for many agricultural crops. Climate change, pesticide resistance, and the expansion of monocultures are among the main factors driving increases in mite pest populations, often leading to severe outbreaks that are difficult to control. Integrated mite management seeks to keep pest populations below the economic injury level by combining different control methods in a compatible, rational, and sustainable way. In this context, this Special Issue highlights applied studies on the main strategies used to control mites in agricultural crops, contributing to integrated management while reducing the environmental impacts of pesticides, minimizing effects on non-target organisms, and promoting the production of healthier food. Therefore, we invite all interested researchers to submit their contributions to this Special Issue, which aims to disseminate key innovations and advances in techniques that support the integrated management of mites in agriculture.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
