

Special Issue

New Oilseed Crops for Biofuel and Biobased Applications

Message from the Guest Editors

Oilseed crops are a valuable source of vegetable oils, which can be converted to biofuels and other biobased products through various chemical transformations. The integration of new oilseed crops into existing agricultural systems requires research in areas ranging from genetic improvement and agronomic management to life cycle and value chain analyses. This Special Issue will focus on “New Oilseed Crops for Biofuel and Biobased Applications”. We welcome novel research and reviews covering a range of topics in oilseed crops, including crop genetics and improvement, production management, biodiversity, crop physiology, phytoremediation, integration of industrial oilseed crops into food cropping systems, growing oilseed crops on marginal land, modeling, lifecycle assessment, economics and marketing, and policy.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
