

Special Issue

Integrated Management and Sustainability of Herbicide Resistance in Crops

Message from the Guest Editors

Herbicide resistance has become a critical challenge for modern agriculture, affecting crop productivity and sustainability. This phenomenon has increased due to the prolonged and repeated use of certain active substances. Since the introduction of synthetic herbicides in the 1940s, we have observed a steady increase in cases of resistance, especially in recent years, where cross-resistance has gained relevance due to the use of substances with similar mechanisms of action. This situation underlines the urgent need to investigate and address the problem. Innovative research is currently underway, exploring biotechnological approaches (including herbicide resistance in crops), agronomic practices, and the use of alternative compounds to mitigate herbicide resistance. This special Issue aims to examine the mechanisms underlying herbicide resistance and cross-resistance in diverse crop species, promoting a comprehensive understanding that will contribute to the development of effective management strategies. We invite original articles, reviews, and case studies that address both theoretical and practical aspects of herbicide resistance and its management strategies.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
