

Special Issue

Preventative Pest Management in Food Crops: A Compilation of Success Stories

Message from the Guest Editor

In this Special Issue, we aim to showcase progress in preventative pest management in food and horticultural production systems in eastern Asia and the Americas. A suite of (non-chemical) approaches is showcased through which food crops are being cultivated in a way that benefits farmers, consumers and the environment. Given the pioneering work that you and your colleagues are conducting on preventative pest control and/or biological control, we hereby invite you to contribute to this Special Issue. We are particularly interested in receiving manuscripts that involve co-authors from several countries, that cover topics of regional/multi-country interest or that provide comprehensive reviews on specific subjects. Also, in addition to outlining the biophysical aspects of your work, we encourage you to elaborate on its broader societal relevance e.g., by emphasizing food safety aspects, socio-economic measures. We look forward to receiving your manuscript prior to 1 November 2022.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief
