

Special Issue

Precision Management to Promote Fruit Yield and Quality in Orchards

Message from the Guest Editors

Precision Agriculture technologies are being increasingly adopted to promote resource efficiency, productivity, and quality. As these are especially important objectives in orchards, any tools and management methods that enhance fruit yield and quality are of great interest to fruit growers and advisers. This Special Issue will collect the most recent advances in the fruit sector as a result of successfully applying methods to achieve an optimal balance of this double production-quality objective. Proximal and remote sensors for vegetation monitoring, machine learning, and artificial intelligence for data analysis and decision-making, and variable-rate technologies for efficient input application are the most relevant aspects that are included in this Special Issue.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
