

Special Issue

Light and Temperature Signals for Regulating Horticultural Crop Growth and Development

Message from the Guest Editors

This Special Issue aims to collect manuscripts focused on light and temperature, important environmental factors which regulate the growth and development of horticultural crops. The precise control and in-depth understanding of light and temperature signals are crucial for maximizing crop growth, development, and productivity in settings such as greenhouses and indoor farms. This Special Issue will explore how photoperiodism, light quality, and temperature influence physiological processes like germination, flowering, fruiting, and photosynthesis, with an emphasis on applications in controlled-environment systems. We encourage contributions on the application of controlled environments, technological innovations, and crop management strategies to optimize these environmental factors.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
