

## Special Issue

# Recent Advances in Rootstock of Vegetable Plants

### Message from the Guest Editor

In sustainable and bio-agriculture, the grafting technique is an environmentally-friendly tool for avoiding or reducing losses in commercial yields intended. This technique enables susceptible commercial cultivars that are grafted onto rootstocks to withstand the negative effects of external stresses. Moreover, this strategy requires the selection of tolerant rootstocks that may enable the attainment of the desired features in the scion. Please share your success stories from research in this "Recent Advances in Rootstock of Vegetable Plants" Special Issue. Submissions on (but not limited to) the following topics are invited: (1) Screening rootstocks to cope biotic and abiotic stresses; (2) Agronomic behavior in vegetable grafted plants; (3) Analysis in physiologic, genomic, metabolomics, etc. parameters in grafted plants; (4) Compatibility studies between rootstock and scion; and (5) Signaling rootstock-scion.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
