Saltwater Aquaponics: A New Challenge for Food Production

Message from the Guest Editors

Dear colleagues, Aquaponics is a promising solution to mitigate the impact of intensive fish production systems. It has received more attention in recent years, as can be seen by analyzing the trend of the number of scientific publications, which grew from approximately 20 in the first decade of this century to about 125 only in 2020. Most of the published research has been conducted on freshwater aquaponics. However, in recent years, a growing interest has been addressed at developing and/or improving the efficiency of saltwater aquaponics. Although the operating principles between the two types of aquaponics are the same, saltwater aquaponics presents many new challenges related to the effect of salt on the system's physical components; variation of fish species; variation and number reduction of plant species that can be used; and management of saltwater after discharge. Based on these challenges, this Special Issue welcomes original research papers, short communications, and review articles that provide insight into all topics related to saltwater aquaponics.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
